EDUCATION

California Polytechnic State University, San Luis Obispo, CA

(Expected Graduation - May 2028)

Bachelor of Science, Computer Science

Relevant Coursework: Data Structures, Design & Analysis of Algorithms, Object-Oriented Programming & Design, Systems Programming, Computer Organization, Computer Security, Database Management Systems, Programming Languages

De Anza College, CA

(June 2023 - March 2025)

Relevant Coursework: Operating Systems, C++ Programming, Java Programming & Problem Solving, Python Programming

Foothill College, CA

(July 2024 - August 2024)

Relevant Coursework: Discrete Mathematics

SKILLS

Languages: Python, Java, C, C++, TypeScript, JavaScript, SQL, RISC-V Assembly

Web Development: React, Next.js, Tailwind CSS

Tools & Platforms: Git, GitHub, Supabase, Vercel, Cursor, Unix, FastAPI, Vite,

Data and AI: PostgreSQL, SQLite, Mongo DB, RAG, LLMs

EXPERIENCE

CodeBox - Director of Engineering, Projects / Co-Lead

(CodeBox: Cal Poly SLO computer science club)

Oct 2025 - Present

- Designed a comprehensive bootcamp curriculum for prospective software developer club members
- Oversee and guide the direction of the tech leads for each coding project
- Led technical architecture and full-stack development for a campus-wide academic resource-sharing platform, defining API design patterns and database schemas across an 8-person engineering team
- Reviewed and merged pull requests across the full stack, enforcing code quality, Git commit conventions, and architectural consistency
- Drove feature scoping and technical prioritization across frontend, backend, and database layers to deliver MVP milestones
- Ran sprint planning and maintained technical documentation to align engineering execution across the team

Hack4Impact Software Developer

Oct 2025 - May 2026

(Hack4Impact: Student-run organization developing projects for local nonprofits)

- Developed a full-stack event discovery and management platform for Spokes, replacing a manual process used by nonprofits to publish and maintain community event information
- Modeled MongoDB schemas and implemented data persistence and validation with Mongoose
- Built RESTful API endpoints in Next.js 16 and TypeScript supporting event creation, management, filtering, and saved events
- Coordinated development through GitHub issues and pull requests; participated in peer code reviews

PROJECTS

Stockbrook

April 2026 - Present

[AI Stock Screening & Portfolio Dashboard](#)

- Engineered a full-stack AI stock screening platform spanning 5.7K+ tracked symbols and successfully screening 5K+ equities against configurable financial criteria
- Designed a FastAPI backend with 46 REST API endpoints and server-sent event (SSE) streaming to deliver Claude responses token-by-token to the React frontend
- Built a configurable screening engine evaluating P/E ratios, revenue growth & 52-week positioning against JSON-defined rules
- Implemented a RAG pipeline indexing 3.8K SEC filing chunks across 75 tickers via SQLite full-text search, grounding AI-generated verdicts with source attribution
- Developed a responsive React and TypeScript frontend with a customizable drag-and-drop dashboard, TradingView/Recharts visualizations, and mobile-first layouts

Tech: Python, FastAPI, Anthropic Claude API, Yahoo Finance API (yfinance), React, TypeScript, Vite, Tailwind CSS

Polypages

November 2025 - May 2026

[polypages.dev](#)

- Built a campus-exclusive note-sharing platform, serving 50+ users, restricted to verified Cal Poly SLO students via calpoly.edu email OTP authentication, deployed on Vercel with Supabase handling authorization, storage, and database requirements
- Engineered a credit-based economy backed by PostgreSQL triggers and RPCs - users earn credits on approved uploads and upvotes, spend them to unlock peer-uploaded PDFs
- Implemented secure file access via Supabase Storage with short-TTL signed URLs (1-hour expiry), ensuring PDFs are never directly accessible without server-side authorization
- Built a full course catalog and discovery system with department-based filtering, fuzzy search via PostgreSQL trigram indexes, and personalized enrolled-course prioritization

Tech: Next.js 16, TypeScript, React 19, Supabase, PostgreSQL, Tailwind CSS, Vercel
