EDUCATION

California Polytechnic State University, San Luis Obispo, CA

(Expected Graduation - May 2028)

Bachelor of Science, Computer Science

Relevant Coursework: Data Structures, Computer Organization, Proj-Based OO Prog and Design, Systems Programming, Design & Analysis of Algorithms

Dual Enrollment, De Anza College, CA

(June 2023 - March 2025)

Relevant Coursework: Operating System Concepts, Prog Method C++, Intermed Problem Solving JAVA, Python Programming

Dual Enrollment, Foothill College, CA

(July 2024 - August 2024)

Relevant Coursework: Discrete Mathematics

SKILLS

Languages: Python, Java, C, C++, TypeScript, RISC-V-32 Assembly

Web Development: React, Next.js, Tailwind CSS

Databases: PostgreSQL, MongoDB

Tools & Platforms: Git/GitHub, Supabase, Cursor, Vercel, MS Office, Figma, Framer, Canva, macOS, Windows

EXPERIENCE

CodeBox Project Co-Lead

Oct 2025 - Present

(CodeBox: Cal Poly SLO computer science club)

- Co-lead an 8-person cross-functional team building a campus-wide academic resource-sharing platform, running sprint planning, code reviews, and technical documentation
- Defined and enforced system architecture decisions including API design patterns and database schema
- Reviewed and merged pull requests across the full stack, maintaining code quality standards and enforcing conventional commit workflows
- Coordinated feature scoping and prioritization between frontend, backend, and database layers to keep the team aligned on MVP deliverables

Hack4Impact Software Developer

Nov 2025 - Present

(Hack4Impact: Student-run organization developing projects for local nonprofits)

- Contributed a full-stack web application for a nonprofit in a cross-functional team
- Modeled MongoDB schemas and implement data persistence and validation with Mongoose
- Developed RESTful API endpoints in Next.js 16 and TypeScript to support core application functionality
- Crafted reusable React components following team design systems and coding standards

theCoderSchool, Code Coach

Sept 2024 - Jan 2025

- Taught Python programming and Scratch to middle-school students

PROJECTS

StockWiz

(AI Stock Screening & Portfolio [Dashboard](#))

April 2026

- Built a full-stack AI dashboard integrating Claude with yfinance API for stock classification
 - Designed a FastAPI backend with SSE streaming endpoints that pipe Claude responses token-by-token to the frontend
 - Engineered a configurable criteria engine evaluating PE ratios, revenue growth, and 52-week positioning against JSON-defined rules
 - Injected live yfinance market data into Claude's system prompt at request time to ground AI analysis in real data
 - Built a React + TypeScript frontend with TradingView and Recharts for candlestick, ROI, and portfolio visualizations
- Tech:** Python, FastAPI, Anthropic Claude API, Yahoo Finance API (yfinance), React, TypeScript, Vite, Tailwind CSS

Polypages

(Codebox [polypages.dev](#))

November 2025 - Present

- Built a campus-exclusive note-sharing platform restricted to verified Cal Poly SLO students via calpoly.edu email OTP authentication, deployed on Vercel with Supabase handling authorization, storage, and database requirements
 - Engineered a credit-based economy backed by PostgreSQL triggers and RPCs - users earn credits on approved uploads and upvotes, spend them to unlock peer-uploaded PDFs
 - Implemented secure file access via Supabase Storage with short-TTL signed URLs (1-hour expiry), ensuring PDFs are never directly accessible without server-side authorization
 - Built a full course catalog and discovery system with department-based filtering, fuzzy search via PostgreSQL trigram indexes, and personalized enrolled-course prioritization
- Tech:** Next.js 16, TypeScript, React 19, Supabase, PostgreSQL, Tailwind CSS, Vercel
